

```
1  #include <stdio.h>
2  int main(void)
3  {
4      //variable declarations
5      float f;
6      float f_num = 1.7f; //simply change this value ONLY to get different      ↗
       outputs...
7
8      //code
9      printf("\n\n");
10
11     printf("Printing Numbers %f to %f : \n\n", f_num, (f_num * 10.0f));
12
13     for (f = f_num; f <= (f_num * 10.0f); f = f + f_num)
14     {
15         printf("\t%f\n", f);
16     }
17
18     printf("\n\n");
19
20     return(0);
21 }
22
```
