

```
...ables\02-ExternalGlobalVariablesInMultipleFiles\File_01.c 1
1 // *** GLOBAL SCOPE ***
2 // global_count is a global variable declared in source code file ExternalGlobalVariablesInMultipleFiles.c
3 // To access it in this file, it must first be re-declared as an external variable in the global scope of this file along with the 'extern' keyword and its proper data type
4 // Then, it can be used as any ordinary global variable throughout this file as well
5
6 #include <stdio.h>
7
8 extern int global_count;
9
10 void change_count_one(void)
11 {
12     //code
13     global_count = global_count + 1;
14     printf("change_count_one() : Value Of global_count in File_01 = %d\n", global_count);
15 }
16
```
